

9/2/70

Dear Harold,

Forgot to mention in letter. Had another idea for writing Morgan under the first assumed name of college kid, as I did much earlier.

I just noticed as you point out in PMIII that panel saw X-rays showing only lower neck. We don't know what was the highest cervical vertebra shown on these. If they went no higher than the fifth or sixth, there may be much metal in the neck not seen.

I could say I'm finishing up the paper and have to know this, could he help me out again.

This could be valuable to know.

Best,

*Howard*
